

AMENDMENT TO THE SPECIFICATION

The specification is under objection pursuant to 37 CFR 1.125(a). The examiner asserts that the paragraph numbering used is improper and that some of the characters, especially those used in formulas/equations, are too small and illegible.

Applicant respectfully submits a substitute specification including the claims as requested. The substitute specification, with an amended title, and a clean version of the substitute specification are attached in the appendix.

Applicant respectfully amends the title to read "Method for Transmitting Wellbore Data Acquired in the Wellbore to the Surface." The specification has not been amended other than with a replacement title, formatting and paragraph numbering.

No new matter has been added in the substitute specification.
